XFLV F-7A RED WAVE COMMERCIAL EDC JET

Suffice to say Rick has his hands full with this one. Stay tuned.

Nose gear bent by rough landing.

EXCESSIVE HEAT WARNINGS RULE

Seems like the winter cold was replaced by spring wind which was replaced by summer's excessive heat. When the going gets toasty the toasted practice in the A/C cooled flying simulator (Real Flight).

Active Warning: Excessive Heat Warning (See More)

UP CLOSE AND PERSONAL

Adaptations

These deer adapt to living in the desert by being active during the warm weather at night or during the early morning hours. They also have adapted to eating a wide variety of vegetation types in order to meet all of their nutritional needs.

Habitat

Mule deer can be found throughout desert regions as long as there is enough vegetation to hide in and to eat. They will move to higher elevations during the hottest parts of the summer and move to lower elevations during the winter months. They also are found in mountain forests, wooded hills and in chaparral.

30 year old Elder

Up in the sky...it's a bird...it's a plane...yup, that's what it is.

The ever popular T-28.

SLICK 72

Bob N.

Bob has a hard time getting parts. The canopy is styrofoam.

SPACEWALKER

Jack P.

The Spacewalker was designed in the early 1980's as a home built aircraft in Hendersonville, NC by Jessie Anglin, intended to capture the essence of a 1930's sport airplane. The design was a success with 2 versions being built; a single place Spacewalker 1 and a tandem 2 seat Spacewalker 2.

Jack says although this plane looks good in the air it's not his favorite because it's very heavy.

160" TURBO BUSHMASTER *3rd and Final configuration*

IC single cylinder vibration is unbearable. Power system #3 (40cc electric on 12S) is now installed. Electric is not my favorite but gas vibrates. Perfection is a continual struggle with no end in sight! This is the final configuration. It's actually pretty nice. Just shorter flight times.
